

Strap Installation

1. The strap will have a small thin cord section. (Figure A)
2. Pinch the thin cord section and thread it through the lug pin of the Yardage Pro and flare the loop open. (Figure A)
3. Take the thick cord and feed it through the loop of the thin cord. (Figure B)
4. Pull the thick cord all the way through and cinch the cord tight by pulling on the thick cord. (Figure C)
5. With both thick cords pulled even (wrist position) slide the plastic loop retainer half way up the line to keep the two loops together. (Figure D)
6. To use as a Neck-Strap, slide the plastic loop retainer back to the end of the cord and pull on just one of the thick cords to make the loop large. (Figure E)
